```
Exercițiul 1
import java.util.Scanner;
public class ForWhileDoWhile {
     public static void main(String[] args) {
          Scanner sc=new Scanner(System.in);
          int n= sc.nextInt();
          int S1= 0:
          int ma = 0;
          for (int i= 1; i<= n; i++) {
               S1=S1+i;
               ma = S1/n;
          if (S1<=1000)
               System.out.println(S1+","+ ma);
          else System.out.println("Suma este mai mare decat
1000");
          sc.close();
}
}
Exercitiul 2
public class WhileForDoWhile {
     public static void main(String []args) {
          int a=5;
          do {
               int b=1;
               do {
                     System.out.printf("%2d", a);
                     b++;
                     }
               while(b<=a);</pre>
               System.out.println();
               a=a-1;
          }
               while(a>=1);
          }
}
Exercitiul 3
import java.util.Scanner;
public class DoWhileForWhile {
     public static void main(String[] args) {
          Scanner sc=new Scanner(System.in);
          int n= sc.nextInt():
```

```
double s1=0;
          double s2=0;
          double i=1,s=0;
               while(i<=n) {</pre>
                     s1=s1+Math.pow(i, 3);
                     s=s+i;
                     s2=s2+Math.pow(s, 2);
                     i++;
                     }
               if (s1<s2) {
                     System.out.println("Cea de-a doua suma
este mai mare decat prima");
               else
                     if(s1>s2) {
                          System.out.println("Prima suma este
mai mare decat cea de-a doua");
                     else {
                          System.out.println("Prima suma este
egala cu cea de-a doua");
               sc.close();
}
}
```
